"3rd Element Web Development" Style Guide
Mason Lapine

Fonts:
- The only fonts that our site should use are the fonts corresponding to the Sans Source Pro font family.
  - Link: https://fonts.google.com/selection?selection.family=Source+Sans+Pro
  - Embed into html:

```html
<link href="https://fonts.googleapis.com/css?family=Source+Sans+Pro&display=swap" rel="stylesheet">
```
  - CSS:

```css
font-family: 'Source Sans Pro', sans-serif;
```

- Colors:
  - We have 3 colors with the following hex values:
    - Blue #0069bf
    - Green #02a556
    - Red #e71224
  - The guidelines we will follow for the website can be anything from white to black and everything in between. Each of these colors relate to a different topic.
    - Blue: CSS

- Red: HTML
- Green: Javascript (.js)
- Website Basic Logo

Notes:
1. It is okay to use code blocks on this site with *different color* syntax highlighting and a monospace font.
2. Code blocks *SHOULD* be used whenever displaying code

on the website. This is an example of a code block:

```
System.out.println("This is a code block");
```

3. Regardless of color change in the code blocks, the font should remain the same throughout the website (Sans Source Pro)

This is a VERY BASIC wireframe for the frontpage of our website.
